Lang's Solution

Hypertonic Intravenous Infusion for Horses

PERFORMANCE/EXERCISE STRESS & RECOVERY

INTRAVENOUS (IV) ALKALINE HYPERTONIC SALINE INFUSION TO MAINTAIN FLUID AND ELECTROLYTE BALANCE IN HORSES.

ACTIVE CONSTITUENTS (PER 500mL)

Sodium chloride 19g, Sodium citrate 19g

Features

- Rapid rehydration effects, particularly useful following long distance transport or heavy exercise.
- Initiates the thirst reflex in horses which are unwilling to drink.
- Restores cellular efficiency and body salts to ensure optimal athletic performance.

Benefits

- Alters the blood profile from one of hypotonic contraction to hypertonic expansion; a gain of salts in excess of water.
- Ideal for rapid restoration of body fluid reserves.

ADMINISTER FOR USE/CONTRAINDICATIONS

Administer entire contents of one 500mL pouch by intravenous (IV) infusion. **This product is for use by veterinarians only.** Ensure fresh, clean drinking water is available immediately after treatment, as horses will seek out water.

IMPORTANT NOTE: The provision of adequate roughage (hay) will aid the prevention of dehydration due to fibrous matter in the hindgut acting as a storage reservoir for water and electrolytes. Horses must receive 1% of body weight daily in roughage provision.

DOSAGE RATES

To be determined by veterinarian.

PACK SIZE(S)

500mL medical pouch for sterile intravenous (IV) infusion. Supplied with 90mm draw off tube, snap-off Luer slip plug and sterile 14G catheter
