

For Horses - In hot conditions, Neutrolene[®] is essential!

Dr Percy Sykes analysed 1379 blood samples taken from racehorses in full work during the 1980's. The results revealed a dramatic drop in pH levels following fast work and again at 2pm in the afternoon. This study revealed an absolute need for an Acid Neutraliser (Neutrolene) in hot conditions.

**This Graph depicts the acidity level of the horses blood over the course of a day, following fast work.*

“A blood acid neutraliser is essential for horses trained in hot conditions.”
-Percy Skykes AM, M.R.C.V.S, M.A.C.V.S.c
