Feed Type	Serving Stallion
Mixed Chaff	1kg
Oats	2kg
Lucerne Hay	2kg (1 Biscuit)
Meadow Hay	Ad Lib
<b>Supplements:</b>	
<b>Ranvet 500 Plus</b>	600g
<b>Ration Balancer Pellet</b>	60g

#### Further Notes:

As a suggested ration, **Ranvet 500 PLUS®** has been included as an exclusive complete protein, amino acid, mineral and vitamin supplement combined into a single pellet, whereby you are able to add your own grain and chaff to control the and body condition of stallions. This supplement is also suitable for working horses as it provides low starch and non-structural carbohydrate (NSC) content and will assist muscle tone as it contains quality amino acids (the building blocks of protein).

The addition of **Ration Balancer®** provides increased levels of folic acid and a comprehensive range of vitamins and minerals to meet the requirements of a 500kg breeding stallion during the mating season. Vitamins and minerals are essential for the maintenance of metabolic function, energy and protein utilisation, preventing free radical damage and ensuring optimal hormone and enzyme production. In particular, folic acid has an integral role in red blood cell production, health and performance of a working horse. B-Group vitamins in particular are water soluble and lost through urination and sweating, therefore requiring daily supplementation.
