Racing Oil

Essential Fatty Acid Feed Supplement For Horses

ENERGY

HIGH ENERGY BLEND OF ESSENTIAL OMEGA 3 & OMEGA 6 FATTY ACIDS, SPECIFICALLY BALANCED FOR HIGH PERFORMANCE HORSES

KEY INGREDIENTS per L:

Omega 3 (Linolenic Acid) 107mL, Omega 6 (Linoleic Acid) 426mL

Features

- Provides sufficient energy for performance, particularly for endurance (aerobic) work where the use of fats spares glycogen stored in muscle tissue so that it is available for intense anaerobic work such as sprinting, jumping, etc.
- Spares glycogen use, reducing the formation of lactic acid, thereby extending endurance and stamina, and delaying muscle fatigue.
- Highly palatable.

Benefits

- Reduces the volume of feed required and significantly improves the available energy for endurance (aerobic) performance in all disciplines.
- Well balanced oils provide 'cool' energy which do not excite horses as seen with high grain diets.
- Limits the heat of digestion, particularly important in warmer climates.

DIRECTIONS FOR USE/CONTRAINDICATIONS

Mix Racing Oil thoroughly through the horse's feed. Supplementation on a continual basis is necessary to maintain effect. It is likely to take at least 4-6 weeks for a horse to become adapted to oil in the diet and it is recommended that you consult your veterinarian when introducing a high fat diet. Introducing oil in increments of 50mL is recommended.

DOSAGE RATES:

A gradual increase of oil in the diet from 50mL to as high as 10% of the diet can be achieved to increase energy density of the ration.

PACK SIZE(S):

5L, 20L & 205L
