

Neutrolene Plus[®]

**Body Acid Neutraliser & Alkali Replacer For Horses
with added BUFFER SALTS**

Specifically Formulated for
Elite Performance Horses

Rapidly Metabolised
and Absorbed.

Balances Blood pH for
Optimum Performance

ACTIVE INGREDIENTS (per L)

Sodium Citrate Dihydrate 280g, Citric Acid 93.4g, Trometamol (Tris Buffer) 11.4g

FEATURES & BENEFITS

- Neutralises excess lactic acid in the blood and muscle.
- Aids in the treatment and prevention of dehydration, acidosis and myopathy/ 'tying up'.
- Rapid utilisation and acid neutralisation improves recovery rate following strenuous exercise.
- Restores depleted reserves of the most common bodily alkali, sodium.
- Supplies adequate body alkalines to neutralise acid build-up.
- Able to be used in conjunction with standard daily electrolyte supplementation of Ranvet's Salkavite.

INSTRUCTIONS:

Administer orally over the tongue or place liquid on dry feed. Continual use is recommended whilst horse is in training.

IMPORTANT NOTE: Ideally, daily broad spectrum electrolyte supplementation should be practiced via the addition of Ranvet Salkavite to the ration. Additionally, horses coming into work produce greater amounts of lactic acid for a given workload and as fitness increases, the ability to buffer and cope with acid improves considerably.

*Neutrolene Plus; Identical to the formulation of NEUTROLENE, with added acid absorbing buffer salts (Trometamol, or Tris Buffer) used as an aid to treat heavily sweating horses with high body salt loss and as an aid to prevent and treat acidosis, dehydration and myopathy (Tying Up)

DOSAGE RATES:

As routine: 90mL daily, as two 45mL doses in separate feeds.
After a race: an additional 30mL (75mL in total) in the night feed.

APVMA APPROVAL NUMBER: 37953

PACK SIZE(S):
5L & 20L
